Company Purpose

Bringing funds to anyone anywhere anytime.

A large, solid dark gray circle containing the text "VC DAO" in white, bold, sans-serif capital letters.

VC DAO

Problem

The problem with current crowdfunding platforms is that there is always one organization as the intermediary.

This gives leverage to the people at the center of it all to twist and turn the outcomes into their favor.

VCDao is here to give the power to the public and to eliminate the need for a centralized authority.

Solution

At your service! Here to decentralize the crowdfunding industry.

We are giving a platform to the community where the people are at its centre. People from various backgrounds will be able to exchange ideas, give feedback on various features, and simply engage with the company to assist in its development.

Built by the community, for the community, managed by the community.

Decentralized in its truest sense.

Why Now?

Because the world is changing.

Blockchain is the new hype. But is it just a hype? Absolutely not!

People today want social justice. They are sick of the concentration of wealth in the hand of a selected few. The common person today is rebellious.

Decentralization of industries gives all the power to the public. And people today are craving power and authority more than ever!

There has not been a better time to decentralize every industry. VCDao aims to decentralize the industry where the transaction is expected to touch \$ 12 billion by 2023.

Solidarity, June 30, 1917. The Hand That Will Rule the World—One Big Union.

Market Size

- The global crowdfunding market size is estimated to reach USD 1.30 billion by 2028
- Our primary target is the startups segment from Asia Pacific and the USA
- North America is expected to be the fastest-growing regional market from 2021 to 2028
- Asia Pacific accounted for the largest market share of more than 80% in 2020 with China being the major contributor
- The COVID-19 pandemic has positively impacted the market

Tokenomics

Topics	Tokens
Team Reserved	300,000,000
Crowdfunding	500,000,000
DEFI Exchanges	200,000,000
Total Supply	1,000,000,000

- The goal of crowdfunding is to raise **50,000 MATIC** for it's initial funding round.
- Right after the funding stage is completed, **200,000,000 VCD** tokens would be pledged against 25,000 Matic tokens in DEFI exchanges.
- While the team holds the tokens to exercise votes and initiate further funding rounds if needed.

Token Utility and Value Proposition

- The main utility of the token is to allow investors to vote upon proposed DAOs and receive a certain percentage (declared by the proposer of the DAO)
- If the vote passes, VCDAO along with other investors receive their tokens of that project.

There is a catch!!!

3% of token burn upon every vote of investors. So the VCDAO holders need to be careful about what they vote for. This strategy is to limit investors from investing into every project that is proposed in order to reap the benefits.

Business Strategy

Companies

- VCDAO allows companies to conduct their DAOs on our platform.
- They are allowed to conduct Votes on DAOs and how they should be operated. Allowing true decentralized nature to be achieved.

Token Holders

- They are the true operators of our platform.
- They get to vote for credible projects and receive a percentage for voting for them.

Investors

- Those who visit our site would get unbiased community supported projects.
- Investors in different DAOs can just simply come to our site and operate the DAOs they have voted for at their own will.

The Team

Muhammad Ammar: I am a fullstack blockchain developer who can also make microservice backends in golang. I currently freelance at Upwork and have worked on a few local projects. <https://www.linkedin.com/in/ammarr-k-840ab0137/>

Muhammad Hasan: 2 years of experience working as a fullstack software engineer at Panacloud. I also have freelancing experience working with multiple start-ups around the globe. <https://www.linkedin.com/in/muh-hasan/>

Shariq Anwar: I'm a Full Stack Serverless Developer and a technology enthusiast. I'm currently exploring cloud and blockchain. I am collaborating to more and more open source projects. <https://www.linkedin.com/in/shariqanwar20/>

Muhammad Shayan Shamsi: I have experience building machine learning projects. I am currently a beginner to Web3. My teammates have helped me immensely in learning technologies like Solidity, Hardhat, and Brownie. Eager to solve problems and always trying to come up with new ideas! <https://www.linkedin.com/in/muhammad-shayan-shamsi/>
